9 - Research project abstract

The project aims to provide a reconstruction of the evolution of the agro-food industry in Italy throughout the 19th and 20th centuries through both overall analyses, including quantitative perspectives, and some sector cases. To this end, the project brings together scholars from several universities (of Milan, Perugia, Ancona, Roma, Bari, Catanzaro) which provide good coverage of the national territory and its relevant productive branches (oenological, dairy, grain and pasta).

The research encompasses a wide range of topics, from the articulated and often problematic trajectories followed by the rural environment, with its diverse "agricultural Italies", to the slow and partial emergence of a modern food industry before the postwar economic boom, and the difficulties of both the primary and secondary sectors in the branch during the following decades, up to the emergence, finally, of Italian typicality and its international success in the age of globalisation. A similar path is meant to be analysed from different perspectives (that of agriculture, of industry, of individual sectors and the areas considered) but with reference to some common themes, such as the rich heritage of the biological and social diversity of the peninsula, the problems of integration between agriculture and industry and the configurations of its production sectors, the decisive role played by local, national and finally supranational institutions and policies. A further principle methodological feature of the project is the effort to integrate the more qualitative approach of the traditional historiography with the recent acquisitions of the quantitative analysis and the reconstructions of historical statistics, in order to improve the perception of the scale of the processes under consideration, to make the results comparable at national and international level, and to foster dialogue and exchange with the other social disciplines and applied sciences. Finally, the project is to be based on an intense series of international comparisons, through collaboration with foreign scholars and research centres operating in Italy and abroad within broad research networks.

The expected results range from the updating of the rich Italian tradition of rural history, to a reassessment of the role of food production in the history of Italian industry, and to the development of specific models of interpretation of the phenomenon of the typical productions and their success on the international markets. Beyond economic history, similar results can have an impact in a wide range of social, business and technical applied sciences interested in an interdisciplinary theme such as food, its production and consumption, as well as public and private entities engaged in the management and enhancement of local areas and their productive assets, such as government institutions, associations or private companies.

10 - Total cost of the research project, per single item

Associated Investigator	item A.1	item A.2.1	item B	item C	item D	item E	item F	Total
CHIAPPARINO Francesco	38.628 €	24.000 €	37.577 €	1.000 €	1.000 €	2.000 €	29.216 €	133.421 €

Total	286.101 €	72.000 €	214.861 €	3.000 €	4.000 €	18.000 €	29.216 €	627.178 €

- item A.1: enhancement of months/person of permanent employees
- item A.2.1: cost of contracts of non-employees, specifically to recruit
- item B: Overheads (flat rate equal to 60% of the total cost of staff, A.1 + A.2.1, for each research unit)
- item C: cost of equipment, instruments and software
- item D: cost of consulting services and similar
- item E: other operating costs
- item F: prize (to take advantage of the prize it is mandatory to attach to the project a declaration signed by the Rector of the university, according to the outline of section B2.7)

PART B

B.1

1 - State of the art

The Italian historiography on modern agriculture boasts a remarkable tradition. Important scholars, such as Emilio Sereni, Manlio Rossi-Doria, Rosario Romeo, Mario Romani, Sergio Anselmi - only to mention some - and the research groups activated by them constituted a crucial landmark of the historiographical reflection on the evolution of Italian society from the Unification, and even before, onwards. This is not surprising (it could not be otherwise) given the central role played by the countryside in the evolution of the country over the past two centuries. While showing the strengths and virtues (from the dynamism of the Lower Lombardy, with its accumulation process over the centuries, to the capacity of the "Mezzadria" (sharecropping) to guarantee a sustainable environmental balance and to preserve the areas in the central part of the country), this notable scholarly tradition has nevertheless returned an image of an overall deficit, marked by the late national agricultural development throughout the 19th and the 20th centuries.

Actually, the history of the rural world in unified Italy is a history, if not of crisis, of one dominated by crises: from the Great Depression of the late nineteenth century (whose dimensions and meanings have been the centre of a recent debate by scholars like Toniolo, Federico, Cerrito, and Frascani) to the interwar recession, less investigated but probably no less central for the emerging of the structural gap between the North and the South of the country, up to the rural exodus after World War II and the escape from the countryside, which marked - at least apparently - the end of a world with all its heritage of backwardness, poverty and inequalities. And after all, this was not unlike the far more scant and recent historiography on the Italian food industry, at least in tone and in its general results, which documented the weakness and fragmentation of the sector before the economic boom and its substantial inability, later on, to create industrial units which were able to compete with the large foreign multinationals.

Such a framework is ultimately what emerges, even with all the necessary caveats and exceptions, from the extensive series of studies that, at the end of the last century, represented one of the landmarks of post-war historiographical research, from the monumental "Storia dell'agricoltura italiana" edited by Piero Bevilacqua, to the numerous essays on rural and food history in the "Storia d'Italia Einaudi", in its various parts, such as the synthesis of the "Annali Feltrinelli", published in 1993. As regards the image suggested by historiography and social analysis, it is a concluded and insufficient story; what emerged, however, since the 1990s, is the worldwide success of typical Italian food. Apart from media suggestions and advertising overstatements, the national agro-food sector has actually achieved recognition in the last two decades. According to several observers, like Istat, Ismea, or Ice, the sector has established itself as the largest owner of local products, certified not only across Europe; standing out as one of the sections of the Italian economy capable of maintaining and even improving its projection on foreign markets during the recent years of crisis. The national agro-food sector has also managed to determine its capabilities of leading business innovation, scientific and technological development and, to some extent, of creating skilled jobs for the younger generation.

At the same time, the food sector, connected to typicality, increased its characteristics of agro-industrial activity, far from both the poor conditions of the traditional peasant world and the massive standardisation of Fordist productions, open to entrepreneurship and scientific progress, able to provide qualified employment, as well as strictly linked to the "Terroir" and its enhancement. To sum up, the emergence of this "new rurality" - as it has been defined - requires a reconsideration of the history of Italian agriculture. Such a reconsideration should aim, on the one hand, to point out the strengths and their relative weight in the challenges faced by the Italian countryside in the last few centuries. On the other hand, it can be useful to connect the new perspectives, opened up by the age of globalisation, with the availability of the rich heritage of analysis on the past, in order to make the national agro-industry aware of its originality and its historical limits, and even to provide operational guidelines in terms of social, cultural, marketing and agronomic policies in order to achieve full appreciation of Italian food traditions.

2 – Detailed description of the project: methodology, targets and results that the project aims to achieve and their significance in terms of advancement of knowledge

Starting from the considerations set out above, the research project aims to reconsider the history of the nineteenth-twentieth century Italian agriculture and food industry, taking into account the recent success of the national typical products. In this perspective, the analysis will focus in particular on the factors at the base of this success, their origins, evolution and persistence over time. To do this, there will be a general reconstruction, mainly quantitative in nature and focused on the different Italian rural environments, led by the PI unit, while an overall analysis of the food industry in the country during the last two centuries will be carried out by Unit 5 (Università Cattolica). There will also be a set of sector case studies. Among these, Units 2 (Milano-Bicocca) and 3 (Università di Perugia) will deal with wine production, Units 4 (Milano-Statale) and 7 (Università di Catanzaro) with the dairy branch, respectively in Central and Southern Italy (sheep's milk) and in the Northern part of the country (bovines), while Unit 6 (Università "Niccolò Cusano" Roma) will work on grain and pasta, with special reference to the province of Foggia, one of the main "wheat areas" of the country. These are only some of the sectors of the varied Italian landscape of typicality, therefore further expansions of the case studies are possible and desirable, once hypotheses and methods of investigation have been tested.

As mentioned above, the various units should base their analyses on the wide heritage of knowledge provided by the tradition of studies of the primary sector and food processing available (the historiography of contractual and conduction arrangements, of the class systems and the social and political dynamics of the rural world, of farms and their management, of agronomic and labour techniques, etc.), reconsidering and improving upon it in relation to at least some common topics:

a. "The biological and social diversity", that is the wide variety of agricultural environments and productive systems existing in Italy historically. Although the typicality of commercial relevance is much less than the approximate number of 270 products officially certified in 2014 according to Ismea (much higher than the 220 ca. in France, at second place in the list), such a high figure shows both the potential of the national agro-industry and the richness of the productive, territorial and cultural contexts to which typical food belongs. Finally, the success of these indicates the importance, also from an economic point of view, of such a heritage of biological and social diversity, as well as the importance of investigating the complex interactions between the resource endowment of the natural environments and the human activities which have generated features and specificities of the typicality in the long term.

b. "The integration between agriculture, industry and marketing". The typical productions of economic relevance are today, as in the past, the fruit of a complex balance among cultivating vocations (and in general productive vocations, mostly in the primary sector), manufacturing processes and marketing structures in a broad sense. The processes of manufacturing should not necessarily be identified with large or medium-large industrial enterprises, nevertheless they involve technically efficient production systems, albeit decentralized, flexible or network-based. With reference to the marketing aspect, this involves both the technical, managerial or financial capacity to reach broad markets (although not necessarily international) and the communication skills necessary to convey meaning and cultural values which refer to the products' areas of origin. For instance the analysis of the difficulties of the largest Italian food companies in the 1970s stressed its scarce integration with the national primary sector. In the same sense, the crisis of several local agricultural systems in the 1960s, as in the 1930s, may be connected, not only in the Mezzogiorno, to the weakness of local units of food processing, which were unable to enhance the area's resources. The analysis of the supply chains, their formation and articulation, as well as the specificity of their actions is therefore a decisive key to understanding, common to the investigation of all the units.

c. "Policies and institutions". In Italy, like elsewhere in the West, governmental policies have played a central role in determining the fates of the modern agricultural systems, starting from the choices of the liberal governments after unification, initially inspired by Laissez faire and then, from the 1880s, oriented to selective protectionism. During the interwar period the many "battles" of the fascist regime - from that "for Grain" to the Bonifica integrale - had wide, and often controversial, influences, which nonetheless have probably been overcome by the weight of the EEC (and later UE) intervention in rural activities and food production. Alongside the government policies also those of associations, local institutions, sector syndicates, and other "intermediate bodies" have had a decisive relevance, especially for the emergence of typical products and their market affirmation. Thus, the analysis of these institutional frameworks, both at the national and at a compared international level, provides further common ground for updating and reconstructing the history of the agro-industrial food sector.

d. "Quality and quantity". One of the bases of the present proposal is an effort to integrate the qualitative and the quantitative investigations, in order to provide a correct perception of the dynamics analysed, their relative proportions and their comparability both in the national and international context. Since 1997, Giacomina Nenci has highlighted ("Le campagne italiane in età contemporanea. Un bilancio storiografico", Bologna, p. 20-21) how the revision of the time series of national accounts, started in those years, would bring into question many of the starting points of the previous rural historiography. Almost twenty years after those considerations, the work of reviewing and reconstruction, on statistical bases, Italian economic history is continuing, on the part of individual scholars and authoritative research centres, such as the Bank of Italy and Istat. Far from being completed, due partly to the difficulties of finding documentary sources, the quantitative reconstruction offers suggestions and solicitations of unquestionable relevance for the more traditional historical analysis, mainly (although not exclusively) based on "qualitative" sources - and conversely needs comparison with the latter, in order to properly frame data collected in the past. A further reason to upgrade the wealth of knowledge of the history of the food and rural business is therefore to put it into the context of recent acquisitions in statistical and quantitative economic history. Also from this point of view, moreover, the issue of typicality appears fruitful, as the agricultural statistics can be a valuable tool in following the birth and evolution (and sometimes even the exhaustion) of most food productions, in identifying their real economic dimensions and their relative weight in terms of output, export, derived income, etc. This task of quantitative reconstruction will be carried out firstly by the PI Unit, with the aim of providing a common data fabric to the other units, and, at the same time, to face one of the main methodological issues - that of the quantitative vs qualitative approach - in the current debate among economic historians.

As to the chronological span of the research proposed, it is mainly centred on the period after national unification as a whole, not excluding, however, that individual research units may go even further back, if required by their analysis. Similarly, some units may focus only on single portions of this timeframe, in relation to their research problems. More specifically, chronological partitions through which the research will unfold are:

- The development of specialised agriculture during the nineteenth century up to the age of the "Destra storica" (with the possibility of projecting a still earlier stage, as mentioned above)
- The impact of the Great Depression and the evolution of the agro-food sector at the beginning of the process of industrialisation in Italy
- The evolution of the interwar period, between international crises and fascist policies
- The great transformation of the post World War II period, from economic recovery to the industrial miracle and the agricultural exodus
- The emergence of typicality and its perception at the time of Community policies and globalisation.

Concretely, the project is articulated in the following research topics for the single units:

Unit 1. (PI - Università Politecnica delle Marche, Ancona): "Quality and quantity. The evolution of the agro-food sector in united Italy".

Reconstruction of the general dynamics of the food industry in Italy, from the evolution of agriculture to the progressive structuring of industrial experiences from the mid nineteenth century up to today, with specific reference to the role and the position (and recognition in many cases) of local specialisations and typical products. This perspective of synthesis intends to provide a background to the investigations for the other research groups. In particular, it moves from data collection to analysis and critical ordering of agricultural and food industry statistics in Italy. The work starts from the data of the Land registry of 1929 - the finishing point of the restructuring of the national agricultural statistics, started at the beginning of the century - and aims to develop time series (for products, prices, employees, type of conduction, added value, etc.) at the provincial level and, in some cases, even at that of the agrarian regions/areas. Such a degree of analysis allows, on the one hand, to improve the current knowledge mostly based on regional statistics and, secondly, to be detailed enough to capture the local specialties and their evolution. From the period between the wars, such statistical reconstruction intends to go forward until reunification with the current series of Istat (from 1946-50 and in some cases since 1970), and possibly to go back to the post-unification period of the 19th century and beyond. In the case of these latter periods, however, the available data are particularly incomplete and heterogeneous, and therefore require further specific insights. Besides the study of the period between the wars and the impact of the 1929 crisis on the agro-food sector, already partly undertaken, the research aims to tackle questions related to, on the one hand, the degree and nature of the rural exodus and the great transformations of the post-war period, and, on the other hand, the issues - fairly widely debated in recent literature - of the Great depression and the economic development of the Giolittian era.

Also the topic examined by the Università Cattolica (Unit 5: "Food markets and consumptions in 20th century Italy: standardization and typicality") will provide a background to the investigations for the other research groups. The unit aims to analyse the dialectic between typical and standardised products either at a national and aggregate level, or at a corporate and sectorial level. Secondly, it investigates how the industrialisation of food, that deeply changes varieties, qualities and prices, shapes the consumption models and is related to the regional food heritage, under the pressure of international market. The study aims to examine, in historical perspective, how the transformation of urban supply channels (wholesale and retail) still allowed access to small local productions; whether productive and marketing strategies of large food enterprises were more or less influenced by some "regional" considerations; how large retailers (acquiring a central position in Italy from the Eighties) considered these consumption styles more diversified in Italy than elsewhere.

The other five Units, as illustrated in the next section of the project, will analyse the following topics:

Oenological sector - Università Milano-Bicocca (Unit 2) and Perugia (Unit 3): "Italian wine from the 19th century to the new millennium: Producing and retailing towards the top positions in the world oenological market"

Dairy sector - Università Milano-Statale (Unit 4): "Industry and typicality in the 19th-20th centuries Lombardy: The dairy supply chain" and Università della Magna Grecia, Catanzaro (Unit 7): "Sheep's cheese production in Central and Southern Italy, between Lazio, Tuscany and Sardinia".

Wheat and pasta - Università "Niccolò Cusano-Roma" (Unit 6): "The agro-food sector in the Province of Foggia (Apulia), with particular reference to the milling and pasta industry, between the end of the 19th and the 20th century"

The general aim of the project is to undertake a broad-spectrum survey that will allow the historical path of the food sector to be defined (understood as an unicum, result of agricultural processes, manufacturing transformation, market conditions, etc.), the variety of its environmental, social and productive frameworks and the role held both within its local productive specialisations and in the Italian history. The overall meaning of the proposal is also to deepen the knowledge of a production sector, the agro-food industry, so far relatively neglected by economic historiography, yet important for the national economy, both because of its historical importance and its recent performance. In the end the project aims, among other objectives, to retrieve and update the rich tradition of Italian rural history, to lay the foundations (thanks to its quantitative component) for international comparisons, and to develop specific models of interpretation of the dynamics of the national food industry as well as of the more recent phenomenon of typicality.

3 - Project development, with identification of the role of each research unit and research organizations involved, with regards to expected targets, and related modalities of integration and collaboration

As mentioned above, it is expected that five units will work on case studies: Milan-Bicocca (Unit 2) and Perugia (Unit 3) on the wine industry, Milan-Statale (Unit 4) on bovine cheese, Catanzaro (Unit 7) on sheep's cheese, Roma-Cusano (Unit 6) on wheat and pasta, while Politecnica Marche (Unit 1) and Milan-Cattolica (Unit 5) will hold a general role, dealing respectively with the quantitative dynamics of Italian agriculture in its various territorial contexts and the evolution of the national food industry. Given this general architecture, Unit 1 (PI) and partly Unit 5, will have the specific task of coordinating, analysing and comparing partial results, providing motivation for the dissemination of information and synthesising the evidence which emerges.

A distinctive feature of the project, which complicates the task of coordination, but which is also one of the strengths of the proposal, is the wide range of geographical locations of the participants. The Units of the seven Universities involved, supported by skilled external researchers, will constitute an efficient staff-team with a fairly broad coverage of the entire national territory.

More specifically, the Units working on the sector cases will have the following tasks:

Oenological sector - The purpose of the Milano-Bicocca and Perugia Units (2 and 3) is to study the production and retailing systems concerning the wine in the following oenological areas: Lombardy (Franciacorta, Lugana, Oltrepò, Valtellina), Veneto (Bardolino), Piedmont (Barolo), Tuscany (Chianti), Umbria (Orvieto and Montefalco) and Apulia. This in fact allows to analyse the deep relation existing between the wine and its Terroir and to make some interesting comparisons with the other European oenological areas, enlightening the factors favouring the recourse to the new production system and the consequent improvement of wine quality, the changes related to the number and the characteristics of producers, the role of international markets and the different impact of legislation (Italian and European) concerning the wine.

Dairy sector - Milano-La Statale and Catanzaro research Units (4 and 7)

The main objectives of La Statale group (Unit 4) are: a) to analyse the development from empiricism to rational production of the dairy industry in 19th and 20th centuries Lombardy, outlining the growth strategies pursued by the firms; their financing systems; the organisation of production and trade, focusing on innovation (scientific and technological) and on the development of commercial relations and new markets; b) to examine the processes of P.D.O. accreditation in Lombardy (but also other Northern Italy areas, when connected) during the second half of the 20th century, identifying the public and private entities involved in the various initiatives. At the same time, also thanks to the collaboration between historians and scholars from other scientific fields, the study aims (c) to analyse the properties of individual products, highlighting how they

revived and innovated the tradition.

The aim of the Catanzaro group (Unit 7) is to investigate the role played in the 19th century by sheep dairy production in the exploitation of local resources (environmental, cultural and business), focusing particularly on the case-studies of Sardinia, Latium and Tuscany and on the relationship between typical dairy production and the territory. The research unit will analyze: a) the consistency, specific traits and evolutionary process of the whole dairy industry, with particular reference to the herd industry and its transformations due to the land reclamation; b) its present dynamics in a comparative perspective, with special reference to the last fifty years and in other national and foreign settings (specifically in France and Spain); c) the activities of dairy production and commercialization over the long period, and especially of export trends.

Cereal sector - The main objective of the Università Cusano research (Unit 6) is to analyse the evolution of the milling sector against the backdrop of the agro-food sector, closely following the case study of the company "Mills Sacco" of Lucera. Cereal production in the Puglia Tableland is part of the culture system as well as a significant economic presence. Currently the provincial and regional development programs have given the sector a strategic value as the agricultural sector is considered one of the levers of greater competitiveness of the economy, thanks to its strategic role in the chain of food processing.

The analysis of all the units will try to highlight the role and action of the institutions each time involved: the national State, the European Community, local bodies (municipalities, mountain communities, provinces and Regions), economic institutions (local banks), trade associations (Assolatte, farmers' unions, producers' consortia), private law authorities (Cariplo Foundation) and scientific-educational establishments.

Concretely, the work will be articulated according to the usual methodology of economic historiography, adapted nonetheless to the single research topics:

- analysis of the national and international literature
- collection of primary sources in public and private archives, in Italy and potentially abroad, statistics, printed sources and specialised Journals (particularly relevant to the sector studies), "grey literature", enquires, online databases, etc.
- creation of the interpretative models for the research topics of each unit, on the basis of the general outlines of the project (presented in the previous section)
- discussion of the results among the units, as well as comparison at national and international level. This latter passage is particularly relevant for the project, as it regards the position of national products, like wine or cheese, in the international market. And also in the cases of topics more linked to domestic developments (such as pasta and, on a different level, the general dynamics of Italian agriculture and its food industry), the international comparison of the processes analysed is extremely relevant in order to define their overall meaning and their relative size.

Collaboration will take place through regular meetings (every three months) with the exchange of information, and at seminars and conferences, as well as through the development and publication of contributions. The time schedule of the project includes:

- three internal meetings a year between the units, to monitor the progress of the work,
- two workshops, respectively at the end of the first year and in the second half of the second year, in order to discuss the partial results of the research carried out, also with external scholars,
- a final conference, in the third year, to present the final results of the work,
- a final period of a few months, in the third year, to manage the final dissemination products
- participation in national and international conferences, either collectively or by individuals from the units of the project, during the whole 36 months of the project's duration, with contributions and the organisation of sessions, panels, etc.

As for its dissemination activities, the project will mainly involve:

- at least two intermediate seminars involving all the units
 - a final conference to present the results
 - a final collective volume, possibly published in English by an international publishing company
 - a series of articles (or a volume or the monographic section of a scientific journal) published at national level.
- Additionally, each research unit is expected to independently provide articles for scientific journals and to participate in conferences and seminars.

The project relies on several connections with research organisations in Italy and abroad, as well as those within the universities participating in the project. Among the contacts and partnerships to which each of the participants can refer, the following may be highlighted:

- the set of collaborations concerning the international history of cheese production initiated at the International Economic History Congress of Kyoto (Aug. 2015), including French, US, Danish and Dutch scholars in the field.
- the collaboration, particularly for the Università Milano-Bicocca, with the Teresma Project (Terroirs Espaces et Marchés) research group of the University of Bordeaux 2, which focuses only on the topic of food typicalities and is part of a network involving many countries, in particular Belgium and Canada
- the connections of several of the project's participants with the University of Tours (L'Équipe Alimentation) and the associated IEHCA (Institut Européen d'Histoire et des Cultures de l'Alimentation)
- the close relationship of many Units with the Food Lab of the University of Parma and Prof. S. Magagnoli, who is very active in several initiatives about wine, cheese, and in general the food industry which is the basis of this proposal
- the connections of the Università Politecnica delle Marche with scholars of rural history, who recently participated in the session entitled "Agriculture and crisis in the Interwar Period" at the International conference on Large-Scale Crises: 1929 vs 2008 (Ancona, Dec. 17-19, 2015), in particular scholars from France (Prof. L. Herment and G. Beaur, CNRS-EHESS, CRH Paris) and the US (Prof. C. Boone, Cornell University), as well as with the Gretha (Groupe de Recherche en Économie Théorique et Appliquée, Université Bordeaux 4)

One goal of the project is to organise meetings and foster relationships which will establish and extend the national and international relations of the individual research units, and make it possible to bring its results to the international scientific networks, also in view of participation in European and international research programmes (e.g. Horizon 2020)

4 – Possible application potentialities and scientific and/or technological and/or social and/or economic impact of the project

The impact of the project can be conjectured and evaluated on different levels. In the particular context of economic history, it may be very consistent and concerns:

- an important and relatively new addition to the traditional studies of rural history, updating its perspectives and connecting it with the new developments in the economic and historical disciplines
- a reassessment of the role of food production in Italian economic history, by removing the relative marginality from which this sector has suffered so far, despite its vast size, its relevance to many areas of the country, and, at least in recent decades, the significant position that it has assumed within the national economy and on the international market

- a better understanding of local production systems and territorial issues related to specific products and the topic of typicality
 - in terms of business history: the reconstruction of the different systems of production and distribution enterprises, from small and medium enterprises, cooperatives, to large industries (including multinationals), analysed with a focus on their ability to organise and react to different conjunctures and demands from the market and consumers; and the establishment of their relations with institutions and policies in local, national, and international contexts.

Beyond the specialist field of economic history, the project can have a consistent impact in a wider scientific context. Food and typicality are interdisciplinary subjects par excellence, involving a dense and complex set of links with Economics, Agronomy, Geography, Anthropology, Business and Marketing, Social and Political Sciences, etc. The aim of the project is also to open a dialogue with these different analytical perspectives and, conversely, to make the contribution of economic history more effective and useful for other disciplines. Particularly productive interactions may be established with Economics on the issues of the evolution of the Italian economy, with Business Science as regards the forms of agro-food business and marketing, with Agricultural Science and Food Technology on processes and specificity of local products.

Outside their strictly scientific relevance, the results of the research can be part of a wider discussion on the possible role of the agro-food sector in the economic development of countries and local communities; on the creation of long-term sustainability of current production systems; on the effects of EU and governmental economic policies. The outputs of the project, finally, may also attract interest in more operational areas, such as marketing and communication policies, those of local governments or the guidelines of firms, consortia, and local or sector associations.

5 – Costs and fundings, for each research unit (automatically calculated)

n°	Associated or principal investigator	Total cost	Co-funding (item A.1)	MIUR funding (other items)
1.	CHIAPPARINO Francesco	133.421 €	38.628 €	94.793 €
2.	TEDESCHI Paolo	93.712 €	32.070 €	61.642 €
3.	VAQUERO PINEIRO Manuel	103.832 €	63.020 €	40.812 €
4.	CONCA Silvia Antonia	92.478 €	54.674 €	37.804 €
5.	FUMI Gianpiero	69.920 €	18.450 €	51.470 €
6.	RIENZO Maria Gabriella	36.218 €	20.761 €	15.457 €
7.	OSTUNI Nicola	97.597 €	58.498 €	39.099 €
	Total	627.178 €	286.101 €	341.077 €

B.2

1 – Scientific curriculum of PI (highlighting, for LS and PE fields, of bibliometric indicators related to publications and citations, and, for SH field, of the quality and impact of publications; awards and other honors; degree of success in Italian or international previous projects)

CHIAPPARINO Francesco

CURRENT POSITION

2011-now Associate Professor in Economic History (winner of public competition in 2010) at the Dipartimento di scienze economiche e sociali (Faculty of Economics "Giorgio Fuà") Università Politecnica delle Marche, Ancona (Italy)

PREVIOUS POSITION

1998-2011 Assistant Professor in Economic History (winner public competition 1998), Univpm, Ancona (Italy)

EDUCATION AND ACADEMIC QUALIFICATIONS

2014 Italian National Scientific Qualification as Full Professor in Economic History

1996-1998 Research Grant Holder at the Dipartimento di Scienze Storiche of the Università di Perugia, (Italy)

1997 Research scholar at the Ecole des Hautes Etudes en Science Sociales (Ehess, Paris) with a monthly grant of the Italian Cnr (supervisor Prof. Patrick Fridenson)

1991-1995 PhD in History, final assessment: "avec distinction", European University Institute in Fiesole (Florence, Italy) with a thesis on Le fabbriche del ciocco-lato. Settore e impresa in Germania, Svizzera e Italia tra il tardo Otto-ncento e la prima guerra mondiale, supervisors: Albert Carreras and Peter Hertner

1990-1991 Research Grant Holder of DAAD-Ministero degli Esteri at the Institut für Europäische Geschichte, Mainz (Germany)

1991 National qualification as teacher of Italian and History in the high schools.

1990 Laurea (four year Degree, MA equivalent) in Lettere moderne (Modern Literature, curriculum and thesis in Contemporary History), 110/110 cum laude, University of Perugia, Italy.

TEACHING ACTIVITIES AND FELLOWSHIPS

2002-now Professor of Bank and Finance History (master's degree) at the Faculty of Economics of Ancona (Univpm)

1999-now Professor of Economic History (bachelor degree) at the Faculty of Economics of Ancona (Univpm)

2002-2007 Teaching Assistant of Economic and Business History at the Master Course in Industrial Heritage of the Università di Padova (postgraduate course) - seat of Terni, at the Istituto per la Cultura e la storia d'Impresa F. Momigliano

1996-2007 Contract Lecturer in Economic and Business History', at the Master courses of the Istituto per la storia e la cultura d'impresa F. Momigliano, Terni (Italy)

ACADEMIC RESPONSABILITIES

2012-now President (coordinator) of the undergraduate course (3-year bachelor degree) in Economics of the Univpm (Faculty of Economics)

2011-now Member of the board of the doctoral school of the Faculty of Economics (Ancona; in 2015 supervision of the PhD thesis of M.Astore on the Italian policy of exchange rates in the interwar period)

2010-now Delegate of the Faculty of Economics at the management board of the Univpm Library.

2010-now Member of the Board of the Centro interdipartimentale di ricerca sul paesaggio (Cirp, Inter-Department Centre of Landscape Research) of Univpm.

2004-2011 Member of various commissions of the Faculty of Economics of Ancona (Tutoring, Week of welcome for the new students, Distribution of research funds, etc.), of the commission for the public selection of assistant professor in Economic History at the University of Perugia (2006) and Salerno (2008), and of chartered accountants (Ancona, 2011)

MEMBERSHIPS OF SCIENTIFIC SOCIETIES

Member of ASSI (Italian Association of Business Historians)

Member of SISE (Italian Society of Economic Historians)

Member of Aipai (Italian Association for the Industrial Heritage, 2003-2014: coordinator of the regional section of Marche, Ancona) and Ticcih (The International Committee for the Cultural Industrial Heritage, Unesco)

Honorary member of Istocarta (Insitute for the Paper History, Fabriano, Italy)

GRANTS AND PARTICIPATION IN FUNDED RESEARCH GROUPS

2014-now coordinator with M. Gallegati, F. Chelli and L. Papi of the Research Project funded by the Univpm, A Tale of Two Crises (on a comparison among the crises of the industrial world), and direction of the unit of economic history of the project.

2005-2010 coordinator with E. Sori (and from 2009 alone) of the Univpm unit in the Network of Excellence Sus.Div. Sustainable Diversity in a Diverse World, funded by the UE and led by Fondazione Mattei (Milan)

2003-2010 coordinator (with R. Giulianelli) of the research group on the Archivio storico Veraci (Firm archives of the Pietro Veraci Snc., Firenze, 1875-1960, machines for olive oil production) funded by the Peralisi Group, Jesi (Ancona, Italy)

1996-2000 coordinator (with Renato Covino) of the research project on the Archivio storico Buitoni-Perugina (Firm archives of the Buitoni-Perugina Industries, Perugia, 1967-1985) and the Museo della Perugina funded by Nestlè Italia.

1997-1999 member of the unit of the Università di Perugia in the research project on the Business Communities. History of the Local Productive Systems in Italy, led by Franco Amatori and funded by Italian Council of the Research

ORGANISATION OF SCIENTIFIC MEETINGS

2015 Organizer (with Mauro Gallegati) of the Intern. Conference Large-scale Crises:1929 vs 2008, at the Faculty of Economics of Ancona (17-19 Dec.)

2015 Chairman of the Session 2B09 at the XVII World Economic History Congress, Diversity in Development, Kyoto (Japan) on the theme of Production, trade and business organization in the dairy sector between early industrialization and globalization

2010 Organizer (with G. Cingolani e G. Canullo) of the Intern. Conference on The Balkan-Adriatic Area form Transition to Integration. 1989-2009, Faculty of Economics (Ancona, May 20-21)

2009 Organizer (with Tüzün Baycan-Levent, Technical Univ. of Istanbul) of the Int. Workshop Migrant Entrepreneurship in Urban Economy: Policy Challenges, (Ancona, Aug. 30- Sept. 1) with the participation of scholars, members of the Chamber of Commerce and of the local governments of Ancona, Istanbul, Amsterdam and Hamburg

2008 Organizer of the Conference Il patrimonio industriale delle Marche (The Industrial Heritage of the marche Region), Ascoli Piceno (Italy, Apr.5)

2006 Organizer (with R. Romano) of the Swiss-Italian Meeting on Il cioccolato in Svizzera e in Italia: industria, mercato, società (Chocolate in Italy and the Switzerland: Manufacture, market, and society) at the Centro Interdipartimentale di Storia della Svizzera "B. Caizzi", University of Milan (Febr. 9-10)

OTHER ACTIVITIES

2011-now Editor (Coordinator of the steering board and of the editing committee) of the review "Proposte e ricerche. Economia e società nella storia dell'Italia centrale" (Proposals and Research. Economy and society in the history of Central Italy) (member of the Scientific Committee from 1998 onwards)

1996-2000 Member of the editing committee of the journal "Archivi e imprese" (Milan)

RESEARCH AREAS

Social, economic, industrial, and business history of Italy during the 19th-20th centuries; International history of food and consumer goods sectors in the 19-20 the century; History of local bank systems in Italy in the 19th and 20th century; Industrial archaeology and industrial heritage. Further items are the history of social and cultural diversity, the history of paper production in the 19th and 20th century; entrepreneurial biographies and family business, the history of local productive systems.

SELECTED PARTICIPATION IN NATIONAL AND INTERNATIONAL MEETINGS

2014 - Discussant at the session "Storia economica tra ambiente e Cultural Heritage", Sise Nat. Meeting "Innovare nella storia economica. Temi, metodi, fonti", Università Roma Tre, Oct. 11.

2014 - (with A. Alici and A. Galli), Fostering New Cultural, Social, and Economic Functions for the "Know How" of Traditional Places to Switch on Smart Reuses of Neglected Urban and Rural Landscapes, Uniscape En-Route Seminars "Injured Landscapes. Reuse and Recycle", Université de Liège, Oct. 5-7

2013 - Family Business and "Defamiliarization" in Long-lived Enterprises of Non-Metropolitan Central Italy: The cases of Buitoni and Miliani, Conference "Firm Longevity and Business History", Benevento, Università del Sannio, Dec. 2-3.

2009 - L'evoluzione dei sistemi creditizi nelle Marche e nell'Umbria (1980-2008), "Italia media: un modello di crescita equilibrato ancora sostenibile?", Icsim, Foligno, Sept. 18-19

2008 - Un caso di capitalismo familiare: i Buitoni dal pastificio di Sansepolcro all'IBP, 1927-1985, Sise Conference "Imprenditorialità e sviluppo economico. Il caso italiano (secc. XIII-XX)" Bocconi Univ., Milan Nov. 14-15

2008 - Fases y dinámicas de la formación del patrimonio de la industria en Italia. Una perspectiva histórico-económica, Incuna, "X Jornadas internacionales de patrimonio industrial agroalimentario", Gijón (Spain), Oct. 1-4

2007 - Market and Nation. A conceptual outline on diversity and sustainability in modern Europe (19th and first half of the 20th century 3rd General Assembly of Sus.Div EU Research Prog., Athens, Center for Economic Research and Environmental Strategy, Nov. 21.

2006 - The industrial landscape in a region of diffused development. The case of the Marche, XIII Conference of The International Committee for the Conservation of the Industrial Heritage, Terni-Roma, Sept.16

1995 - Milk and Fondent Chocolate and the Emergence of the Swiss Chocolate Industry at the Turn of the 20th Century, 4th Symposium of the International Commission for Research into the European Food History (ICREFH), Vevey (CH), Sept.15

1994 - Cooperation and Competition Among National and Foreign Firms in Industrializing Italy. Tobler and the Case of the Chocolate Industry, 1900-1940, all'XIth International Conference of Economic History, Sez.C44, Milan, Bocconi Univ.

1994 - Von der Trink- zur Essschokolade: Veränderungen eines Genummittels zwischen 19. und Anfang des 20. Jahrhunderts, 2.Internationales Kolloquium zur Kulturwissenschaft des Essens, Thurnau (Germany)

1993 - Industrialization and Food Consumption in United Italy, 3rd Symposium of the ICREFH, Wageningen (NI)

2 - Scientific curriculum of associated investigators (highlighting, for LS and PE fields, of bibliometric indicators related to publications and citations, and, for SH field, of the quality and impact of publications; awards and other honors)

1.

TEDESCHI Paolo

CURRENT POSITION

- * Associate Professor in Economic History, University of Milan-Bicocca
- * Assistant Professeur Associé - Economic History of the Contemporary Europe, University of Luxembourg
- * Collaborateur Scientifique - Economic History - UCL Louvain

EDUCATION AND SCHOLARSHIPS

2000-2005 Member of the research programme, funded by CARIPLO Foundation, "Un archivio storico virtuale: l'anagrafe degli operatori finanziari milanesi dal 1815 al 1961", coordinator A. Moioli

RESEARCH AREAS

Economic and business history of Italy during the 18th-20th centuries. Economic and social history of Europe from the early modern age to the present. Business History around the world in the long period

RESEARCH INTERESTS

My research interests focus on the European economic development and, by a local perspective, on the

history of Italian industrialisation (innovation in technologies, commercial and credit networks, local business systems) and on the strategies of enterprises in Italy and in Lombardy between the 18th and 20th centuries. Most of my studies are based on primary sources from public and private archives, especially notarial deeds. Actually I'm working on three subjects: the relationship between economy, state and war in Europe during the early modern age; the evolution of Lombard nobility (noblemen as entrepreneurs, land and business) and merchant family firms (especially silk and cotton sectors), since 18th up to 19th century and their contribution to the Italian economic development; the transformation of the Italian rural and food sector from the 19th to the 20th century

MAIN PUBLICATIONS UNDER PRINT OR FORTHCOMING:

BOOKS:

- "Cotton Enterprises: Networks and Strategies. Lombardy in the Industrial Revolution 1815-1860", London-New York, Routledge, 2016 [ISBN 9781138940789] under print

4.

FUMI Gianpiero

Actual position

Associate Professor of Economic History (Secs-P/12).

National Scientific Qualification for Full Professor obtained in session 2014.

Primary affiliation: Department of Economic and social history and geographical studies "Mario Romani" at the Catholic University of the Sacred Heart, Milan

Education

1994: Ph.D. in Economic and Social History, University Bocconi - Milan, with a dissertation titled "Transformations of preindustrial technical systems: wool and silk manufactures in the region of Bergamo (mid-18th century – 1861)", supervisor prof. Angelo Moioli.

1985-1995: Teaching Assistant at the Institute of Economic and Social History "Mario Romani" - Catholic University of Milan.

1985: 'Laurea' Degree cum laude in Political Science, Catholic University of Milan, defending a dissertation titled "Italian agriculture in the first two decades after political unification: the trend of productions", supervisor prof. Sergio Zaninelli.

Academic Appointments

Nov. 2010-present: Associate Professor of Economic History, Catholic University of Rome and Milan.

Courses in Economic History, Business History, History of Welfare, Economic History of Culture

1995-2010: Assistant Professor of Economic History - Catholic University of Milan.

1990: Courtesy Appointment – Professor of Agriculture History – University of Trento (IT).

1984-present: Teaching Assistant at University of Trento, University of Brescia, Catholic University of Milan and Piacenza.

Research Projects

Member of the research team and managing collaborator of three scientific projects 'of relevant national interest' founded by the Italian Ministry of University and Research:

PRIN 2005, project title: "Public Intervention, Dirigism and Economic Planning in Italy: Continuities and Discontinuities (1922-1956)", scientific coordinator prof. Alberto Cova;

PRIN 2002, project title: "Italian Economic Integration in the Western System: the Influence of Institutions and Social Forces (1945-1957)", scientific coordinator Prof. Alberto Cova.

PRIN 1999. project title: "Local Identities and Integrations Levels in Economic Development of the Alpin Region (18th-20th Century)", scientific coordinator prof. Sergio Zaninelli.

Since 1995 member of scientific committees or scientific coordinator of academic projects and conferences in the fields of economic and social history. Inter alia:

2015: scientific meeting on "Preparing for professions. The savoir-faire in the context of the 'cascina' [large farm]", organized by the University of Pavia.

2012: scientific meeting on "Beyond assistance. Work and vocational training in children's welfare institutes (18th-20th c.)", organized by Catholic University of Milan - Museo Martinitt e Stelline, Milan.

2004-2005: "Social services in Italy after WWII (1945-1968): continuity and innovation", promoted by the Archive for the History of Italian Catholic Social Movement – Milan.

The main interest fields in research can be summarized in these directions:

1. Industrial and entrepreneurial history (with essays in Italian cotton, wool and silk manufactures, food industry, business associations, individual entrepreneurs);
2. Economic history of Lombardy in modern and contemporary period (particularly about the low provinces and towns of the region);
3. Agricultural history in Northern Italy (with an historiographical review about farms, essays in the diffusion of agronomic knowledge, agricultural education, agrarian exhibitions, agrarian publishing, agronomist biographies, cereals varieties, cattle breeding and markets, post Unification agrarian policy);
4. Public policies and welfare institutions in Italy (with essays in professional training and technical education from 19th to 20th century; transports and communications system, specifically the railways; labour policies in the transition from fascism to Republic; Italy's international compacts on social security after WW2, financial assets of charities).

As the list of publications shows, besides the contributes dealing with the agrarian structures and infrastructures, some others concern the impact of the transformation of food supply chains and markets on agriculture sector, and viceversa. The growing interdependences and the bidirectional interactions can be found in the studies devoted to one of the largest Italian firm in the dairy sector (Latteria Soresina) and the changing economy of the lower parts of the Lombardy (Milan and Cremona provinces). A special attention is paid to the transformations of animal husbandry (innovation in races, technologies, institutions) in 19th-20th centuries. In this field, the participation to some qualified international meetings of European Rural History Organization can be remarked: at Bern (August 2013) focusing on "Cattle husbandry and breeding in Northern Italy (19th-early 20th century): the search for improvement"; and at Girona (September 2015) dealing with "Independent from the Army. The search for a better draught horse in Northern Italy (ca. 1880-1914)".

5. **RIENZO Maria Gabriella**

CURRICULUM VITAE WITH LIST OF PUBLICATIONS

Dr. Maria Gabriella Rienzo

Research fellow with tenure in disciplinary sector SECS P12, Economic History, in the Faculty of Economics, University of Foggia, Via IV Novembre 1, 70100 FOGGIA, Italy.

She qualified national scientific functions Associate Professor, in the competition sector 13 / C1, verbal 28/11/2013.
